

### Abstract of the Disclosure

Improved organophotoreceptor comprises an electrically conductive substrate and a photoconductive element on the electrically conductive substrate, the photoconductive element comprising:

- 5 (a) a charge transport material having the formula

where R<sub>1</sub>, R<sub>2</sub>, R<sub>3</sub>, R<sub>4</sub>, and R<sub>5</sub> are, independently, an alkyl group, an alkaryl group, an aryl group, or a heterocyclic group;

- 10 R<sub>6</sub> and R<sub>7</sub> are, independently, hydrogen, an alkyl group, an alkaryl group, an aryl group, or a heterocyclic group;

Y is a linking group;

X comprises an aromatic group; and

Z comprises an arylamine group; and

- (b) a charge generating compound.

- 15 Corresponding electrophotographic apparatuses and imaging methods are described.
